Masters of Laundry & Dry Cleaning since 1959.

Striving to provide the highest quality garment care for true value.

We have recently reinnervated our dry cleaning technology & now we are one of the first in the UK to use the latest innovation in the industry. Making us friendlier to the environment, giving a improved clean and nicer finish.

Now using SENSENE:

This solvent has a very high solvency power and reliably removes a variety of stains on different fabrics. It is designed to prevent discolouring and keeps the bright colours of the dry cleaned textiles.

Based on a modified alcohol formulation which is inherently biodegradable, not expected to accumulate in the food chain and has a low aquatic toxicity, and therefore an environmentally responsible way of dry cleaning.

It is very gentle to the dry cleaned fabrics and causes relatively low wrinkling which makes ironing easier. This provides cleaned textiles with a great touch.

It realizes an easy and smart textile cleaning process: textiles dry faster and the machine cycle times are shorter. Meaning the dry cleaning process needs less energy. Therefore we can provide a great clean & pass savings onto the customer.

leaves nothing but a pleasant, clean smell on the dry cleaned textiles. The stable modified alcohol formulation keeps even your cleaning machine clean by minimizing bacteria accumulation and the development of an unpleasant smell.
